

each DLCI corresponding to a plurality of destinations and wherein said dynamic computation comprises basing the data link connection identifier (DLCI) on interactive application information and wherein said interactive application information corresponds to a telnet application.

75. (Amended) A method comprising the steps of:
- receiving frame relay data packets into a fast packet network, and
- switching said frame relay data packets within the fast packet network responsive to a dynamically computed data link connection identifier (DLCI),
- each DLCI corresponding to a plurality of destinations and wherein said dynamic computation comprises basing the data link connection identifier (DLCI) on interactive application information and wherein said interactive application information corresponds to a file transfer protocol (FTP) application.
